Arjun Venkataraghavan

Product Security Engineer

arjun.venkataraghavan@example.com · Bengaluru, India

SUMMARY

Product security engineer with eight years across SaaS companies. I build secure defaults into the frameworks developers already use, review architecture for abuse cases and run the vulnerability disclosure process. I enjoy teaching and have run internal workshops on secure design for more than 200 engineers. I am drawn to problems where design and security intersect.

SKILLS

Secure design reviews	Supply chain security (SBOM, SCA)	Container image scanning
Admission policies for Kubernetes clusters	Dependency management	Fuzzing
Go	Python	IAM design
Vulnerability disclosure		

EXPERIENCE

Period	Position	Responsibilities
2020 – Present	**Senior Product Security Engineer** Kavyanet Cloud Software	• Created hardened service templates adopted by 70 microservices, with authentication and logging enabled by default. • Set up SBOM generation and dependency scanning, shortening patch time for critical libraries from 30 days to 6. • Wrote admission policies for our Kubernetes clusters that reject unsigned or root containers. • Reviewed 100+ architecture proposals and documented recurring abuse cases in an internal wiki. • Introduced a lightweight security review checklist that fits inside pull request templates and takes under ten minutes. Run a monthly office hour where any developer can bring a design question.
2017 – 2020	**Security Engineer** Pinnacle Billing Labs	• Built a fuzzing harness for the invoice parser in Go that found 9 memory and logic bugs. • Handled inbound vulnerability reports and coordinated fixes with developers. • Ran onboarding sessions on secure coding for new hires. • Triaged 150 reports from researchers and published a security.txt and clear disclosure policy. • Partnered with legal to define response times for external researchers.
2015 – 2017	**Software Engineer** Sundial Analytics	• Developed Python data services and wrote unit tests for ingestion code. • Wrote the first set of unit and integration tests for the ingestion pipeline. • Took part in on-call rotations for the data platform and wrote short runbooks for the most common alerts. • Learned about secure coding mistakes by reading CVE reports and reproducing them in a lab.

EDUCATION

2011 – 2015	BTech Computer Science	Deccan Institute of Technology (fictional)

LANGUAGES

English (C2), Hindi (native), Kannada (fluent)
