Wolfgang Staudinger

Staff ML Engineer

wolfgang.staudinger@example.com · Munich, Germany

SUMMARY

Staff engineer bridging data science and production systems for a mobility company. Fourteen years of experience; I own model serving, monitoring and the team's engineering standards. I deploy to the shared Kubernetes platform maintained by colleagues. I enjoy mentoring, writing design docs, and reviewing code for the whole group. My preference is small, testable services, strong observability and engineering practices that scientists find easy to follow.

SKILLS

PyTorch, Model serving, Triton, MLflow, Python, Feature engineering, Spark, Time series, Monitoring, Rust (basic), gRPC, Docker

EXPERIENCE

Staff ML Engineer, Isarway Mobility 2017 – Present

- Built the ETA prediction service handling 4,000 requests per second at p99 under 40 ms, and wrote the migration guide that the other teams followed during their own rollout.
- Standardised model packaging and registry workflow with MLflow across eight teams, with automatic rollback if latency or error rates crossed agreed thresholds.
- Introduced shadow deployments and drift alerts; two regressions were caught before launch, and documented the trade-offs openly so that new engineers could challenge them.
- Release services onto the internal Kubernetes platform via templates from the platform team.
- Mentor six engineers and chair the model review board before any launch.

Data Scientist, Bavarian Telematics 2012 – 2017

- Developed driver behaviour scoring models.
- Wrote Spark feature jobs on telemetry.
- Reduced telemetry processing time by 70% by rewriting feature jobs in Spark.
- Presented driver scoring results to the insurance partners.
- Collaborated with product managers on pricing and driver incentive experiments.

Research Engineer, Munich Applied Research Centre 2010 – 2012

- Worked on Kalman filtering for positioning.
- Published two papers on filtering methods and presented at a conference.
- Implemented a signal processing library in C++ that was reused across several projects.
- Supervised master's theses on filtering and sensor fusion.

EDUCATION

- Dr. rer. nat. Physics, Technische Hochschule Südbayern (2006 – 2010)

LANGUAGES

German (native), English (C2)
