Oluwaseun Adebanjo

Senior Platform Engineer

oluwaseun.adebanjo@example.com · Manchester, United Kingdom

SUMMARY

Senior platform engineer with twelve years in infrastructure, the last six building internal platforms on AWS. I care about golden paths that let product teams ship without filing tickets. Most of my time goes to EKS clusters, Pulumi programs and GitOps workflows, with a strong interest in cost visibility and developer experience. Outside work I run a small study group for engineers preparing cloud certifications and contribute documentation fixes to open-source tools I rely on.

SKILLS

AWS, EKS, k8s operators, Pulumi (TypeScript), ArgoCD, GitOps, Helm charts, Prometheus, Grafana, Istio, Python, Go, Linux

EXPERIENCE

Senior Platform Engineer, Brightwell Logistics — 2020 – Present

- Run a fleet of nine EKS clusters serving 140 microservices; cut node spend by 31% through bin-packing and spot capacity.
- Replaced hand-built environments with Pulumi stacks written in TypeScript, shrinking new-environment lead time from two weeks to forty minutes.
- Introduced ArgoCD and a GitOps repository layout; deployments went from weekly to roughly 60 a day with automated rollback on failed health checks.
- Mentor four engineers and chair the platform guild.
- Defined a cost-allocation tagging scheme and a weekly report so every squad sees what its workloads cost.
- Partnered with the security team on admission rules, image signing and short-lived credentials for all clusters.

DevOps Engineer, Calderfield Retail — 2016 – 2020

- Containerised a monolithic e-commerce stack and moved it from bare-metal hosts to a managed container service.
- Wrote Jenkins shared libraries used by 30 teams for build, scan and release automation.
- Built the first on-call rota and runbooks; mean time to recovery fell from 95 to 22 minutes.
- Taught developers to read dashboards and trace requests, which reduced escalations to the infrastructure team by about a quarter.
- Piloted service mesh traffic shifting for safer releases of the checkout service.

Systems Administrator, Northgate Hosting — 2013 – 2016

- Looked after 400 Linux servers, patching, monitoring with Nagios and scripting routine work in Bash and Python.
- Automated provisioning with Puppet, removing most manual server builds.
- Built a small internal wiki of recurring fixes that cut repeat tickets noticeably.

EDUCATION

- BSc Computer Systems, University of Northmere (2009 – 2013)

LANGUAGES

English (native), Yoruba (fluent)

CERTIFICATIONS

- AWS Certified DevOps Engineer – Professional
- Certified Argo Practitioner
