Adaeze Okonkwo-Reyes

Go Developer

adaeze.okonkwo.reyes@example.org · Lisbon, Portugal

SUMMARY

Mid-level developer who enjoys building clean, well-tested HTTP and gRPC services. Moved from Node.js to Go four years ago and have not looked back. I like small interfaces, table-driven tests and clear runbooks. Outside work I mentor career-changers learning Go through a community bootcamp, and I write short blog posts on testing patterns. I am comfortable working in distributed, remote-first teams across several time zones.

SKILLS

Go, REST, gRPC, PostgreSQL, sqlc, Chi router, RabbitMQ, Testcontainers, GitHub Actions, OpenAPI, Docker, SQL migrations, Clean architecture, Code review, Idempotent APIs

EXPERIENCE

Go Developer, Tagus Mobility 2022 – Present

- Own the booking service handling 2 million requests a day for a ride-sharing app, which meant weekly conversations with drivers' support staff to understand real failure cases and turn them into automated regression tests.
- Replaced hand-written SQL scanning with sqlc, removing a class of runtime errors.
- Wrote contract tests with OpenAPI so mobile teams could mock the API.
- Added structured logging and tracing; mean time to diagnose incidents halved.
- Pair weekly with a junior colleague and facilitate our fortnightly retrospective for the squad.

Backend Developer, Lagos Fintech Collective 2019 – 2022

- Built wallet and transfer APIs in Node.js, later rewrote the hot path in Go, handling currency conversion, regulatory limits and reconciliation exports that finance teams reviewed every month.
- Integrated three payment gateways with idempotent retries.
- Maintained a RabbitMQ topology for notifications.
- Reduced duplicate transfers to nearly zero by adding idempotency keys to every write endpoint.
- Documented API error codes so that support staff could resolve customer questions without escalation.

Junior Developer, Ibadan Digital Studio 2017 – 2019

- Built REST endpoints and small admin tools for e-commerce clients in Node.js and Express.
- Learned relational modelling by designing the order schema for a grocery delivery start-up.
- Handled customer bug reports and released fixes within agreed response times.
- Gained early experience with SQL schema design, background jobs and third-party payment APIs.
- Joined a volunteer team building a booking tool for a local clinic.

EDUCATION

- BSc Computer Engineering, University of Ibadan Polytechnic (2013 – 2018)

LANGUAGES

English (native), Portuguese (B1)
