Aishwarya Ramachandran

Senior Test Automation Engineer

CONTACT

aishwarya.ramachandran@example.com
Hyderabad, India

SKILLS

- Selenium WebDriver
- Playwright
- Java
- TestNG
- REST Assured
- Cucumber
- Jenkins pipelines
- Docker
- SQL
- Allure reports
- Contract testing (Pact)
- Gherkin
- Flaky test analysis
- Test data management

LANGUAGES

- English (fluent)
- Telugu (native)
- Hindi (fluent)

CERTIFICATIONS

- ISTQB Advanced Test Automation Engineer

EDUCATION

- B.Tech Computer Science (final project: an automated attendance system), Telangana Institute of Technology (2008 – 2012)

SUMMARY

Test automation engineer with eleven years in fintech and insurance. I design maintainable automation frameworks, push quality checks into the build pipeline, and coach developers on testability. I prefer reliable, fast suites over large flaky ones. Away from the keyboard I mentor women moving into testing careers and speak at quality engineering meetups on reliable automation.

EXPERIENCE

Senior Test Automation Engineer, Godavari Insure Tech 2019 – Present

- Rebuilt the UI regression suite in Playwright; run time fell from 3 hours to 25 minutes.
- Added Pact contract tests between twelve services, catching breaking changes before release.
- Set up Jenkins pipelines that block merges when smoke tests fail.
- Reduced flaky test rate from 14% to under 2%.
- Review test code in pull requests, apply the same standards as production code and keep dashboards of failure causes.

Automation Engineer, Charminar Software Services 2014 – 2019

- Developed a Selenium and TestNG framework used by five projects.
- Automated API checks with REST Assured and SQL data validation.
- Trained twenty manual testers in basic scripting.
- Created a reusable reporting layer that gave managers daily visibility into failures and trends.
- Worked with developers to add unique test identifiers so locators stopped breaking.

Test Engineer, Musi Systems 2012 – 2014

- Executed manual regression cycles and logged defects.
- Wrote detailed test cases for loan and policy workflows, linked to requirements.
- Logged and verified around 600 defects during two major releases.
- Reported weekly status to the project manager and flagged risks to schedule early.
- Took part in knowledge transfer sessions with developers to learn the business rules behind policy pricing.
