Babatunde Ogunleye

Senior Python Engineer

babatunde.ogunleye@example.com · Lagos, Nigeria

SUMMARY

Senior backend engineer with twelve years building payment and ledger services in Python. I care about correctness under load, boring technology and mentoring people into owning their services end to end, including on-call. Outside work I write internal engineering essays and speak at local developer meetups about reliability and clear ownership.

SKILLS

Python 3	Django	Django REST Framework
Celery	PostgreSQL	Redis
RabbitMQ	pytest	Sentry
Domain-driven design	Event sourcing	Structlog
OpenAPI		

EXPERIENCE

Period	Position	Responsibilities
2019 – Present	**Principal Backend Engineer** Kobo Ledger Systems	• Redesigned the settlement engine around an append-only ledger, cutting reconciliation errors from 1.2% to under 0.01%. • Moved 40 Celery task types to idempotent handlers with retry budgets; nightly batch window fell from 6h to 90 minutes. • Led a team of six; introduced design reviews and written runbooks, halving production incidents in a year. • Tuned PostgreSQL queries and partitioning for a 2 TB transactions table, p95 API latency down from 800 ms to 210 ms. • Chair the quarterly architecture forum and maintain the shared Python coding standard used by around sixty engineers.
2014 – 2019	**Backend Developer** Naijapay Technologies	• Built merchant onboarding APIs in Django serving 300k requests per day. • Integrated four card processors and two bank transfer rails behind a single adapter interface. • Wrote the internal test harness that simulated processor outages; adopted by three other teams. • Drove migration from Python 2 to Python 3 across 120k lines with zero downtime. • Mentored two graduates who now lead their own services.
2011 – 2014	**Junior Developer** Ikeja Web Works	• Maintained PHP and early Django client sites, fixed bugs and wrote reports for a logistics customer. • Automated invoice generation with Python scripts, saving the finance team two days a month. • Learned version control, code review and testing discipline from a patient senior team. • Introduced contract tests between the ledger and the payout service, which caught breaking changes before every release for two years.

		• Documented failure modes and recovery steps for each payment rail in a living runbook.

EDUCATION

2007 – 2011	BSc Computer Science	University of Ibadan Heights

LANGUAGES

English (native), Yoruba (native), French (A2)

CERTIFICATIONS

- PCI DSS Awareness Training
- Advanced Python Workshop, Lagos Dev Academy
- Secure Coding for Payments, Kobo internal programme
