Callum Pettigrew

Senior Site Reliability Engineer

callum.pettigrew@example.com · Edinburgh, United Kingdom

SUMMARY

I have spent fourteen years keeping production systems alive, first as a sysadmin, then as a DevOps engineer and now as an SRE at a streaming business. My toolbox these days: AKS, Pulumi in Python, ArgoCD, Azure Pipelines and a lot of Grafana. Away from the keyboard I am a volunteer lifeboat crew member, which has taught me more about calm leadership under pressure than any course.

SKILLS

Azure, AKS, Pulumi (Python), ArgoCD, Azure Pipelines, Grafana, Mimir, Tempo, KEDA, Linkerd, Chaos engineering, Python, Bash, Linux internals

EXPERIENCE

Senior Site Reliability Engineer, Glenmorrow Media Streaming 2019 – Present

- Responsible for the availability of a video delivery platform peaking at 2.3 million concurrent viewers; delivered 99.95% over the last four years.
- Operate AKS node pools with KEDA autoscaling for bursty encoding jobs, saving roughly 180,000 pounds a year.
- Describe all cloud resources in Pulumi (Python) and review every change through pull requests.
- Run quarterly game days and chaos experiments; found and fixed eleven hidden single points of failure.
- Interview and onboard new SREs.
- Wrote a capacity model that predicts encoding demand from the release calendar and has been within 6% for two years.
- Cut mean time to detect from 11 minutes to under 3 through better symptom-based alerts and synthetic probes.

DevOps Engineer, Stirling Gaming Ltd 2015 – 2019

- Brought the build, test and release process of four game backends into one set of pipelines in Jenkins and later Azure DevOps.
- Containerised services and introduced rolling deployments on a container orchestration platform.
- Implemented central metrics collection and alert routing.
- Created self-service tooling that lets developers create test environments on demand and tear them down automatically.
- Presented the migration case study at two regional conferences.

Systems Administrator, Tay Valley Council 2012 – 2015

- Supported 800 users and 60 Windows and Linux servers.
- Managed VMware hosts, backups and a small Cisco network.
- Learned to write clear incident reports and to keep calm on the phone with angry users.

EDUCATION

- BEng Electronic and Software Engineering, University of Forthbridge (2008 – 2012)

LANGUAGES

English (native), Scottish Gaelic (basic)
