Chidinma Eze

Software Developer (.NET)

CONTACT

chidinma.eze@example.org
Lagos, Nigeria

SKILLS

- C#
- .NET 8
- ASP.NET Core
- Entity Framework Core
- SQL Server
- Dapper
- xUnit
- Azure DevOps
- Service Bus
- REST
- MediatR
- Swagger
- Clean architecture
- Code review
- Secure coding

LANGUAGES

- English (native)
- Igbo (native)

CERTIFICATIONS

- Microsoft Certified: Azure Developer Associate

EDUCATION

- BSc Computer Science, Lagos Central University (2014 – 2018)

SUMMARY

Mid-level .NET developer with six years of experience in banking and payments. I work mostly with ASP.NET Core APIs and SQL Server, and enjoy clean architecture and meaningful unit tests. Beyond coding, I enjoy mentoring new graduates and presenting at our developer community in Lagos. I am comfortable with stakeholders from compliance and operations and take security seriously.

EXPERIENCE

Software Developer, Eko Payments Gateway 2022 – Present

- Develop card settlement APIs in ASP.NET Core serving 400,000 transactions a day, working with fraud analysts and compliance officers to ensure that every settlement rule was documented, tested and explainable to auditors in plain language.
- Introduced MediatR and vertical slices, reducing merge conflicts between squads.
- Wrote xUnit suites covering reconciliation rules; defects in production fell by a third.
- Use Azure DevOps boards and pipelines supplied by the team.
- Reviewed pull requests daily and coached two junior developers on clean architecture and test design.

Junior .NET Developer, Naija Microfinance Tech 2020 – 2022

- Built loan application screens and APIs, where I learned to build maintainable APIs under pressure while serving branch staff in several Nigerian cities.
- Optimised SQL Server stored procedures.
- Fixed defects raised by branch staff.
- Cut nightly settlement runtime from four hours to forty minutes by rewriting stored procedures and indexing.
- Helped the compliance team by implementing audit trails for sensitive operations.

Intern, Lekki Software Hub 2019 – 2020

- Supported a team building ASP.NET MVC portals.
- Fixed reported defects and wrote unit tests for the loan calculation module.
- Attended product demos with the business team to understand customer needs.
- Gained first experience of ASP.NET MVC, SQL queries and agile teamwork.
- Presented a final demo to the engineering manager and received a full-time offer.
