Chidinma Okonkwo-Eze

Cloud Security Engineer

chidinma.okonkwo-eze@example.net · London, United Kingdom

SUMMARY

Cloud security engineer focused on AWS and Azure guardrails. I turn compliance requirements into automated, preventive controls and help engineering teams ship safely without waiting on a manual review. Previously a SOC analyst, so I know what detection looks like from the receiving end. I mentor two junior colleagues and speak at community security meetups about cloud misconfigurations.

SKILLS

AWS Organizations & SCPs	Azure Policy	GuardDuty
Security Hub	IAM least privilege	Checkov
CloudFormation	Policy as code (OPA)	SIEM (Splunk)
ISO 27001	CIS Benchmarks	Python

EXPERIENCE

Period	Position	Responsibilities
2021 – Present	**Cloud Security Engineer** Harrowgate Retail Group	• Designed service control policies and account guardrails across 120 AWS accounts, blocking public storage by default. • Added Checkov scanning of CloudFormation templates to the delivery pipelines, catching misconfigurations before deployment. • Reduced mean time to remediate high-severity cloud findings from 19 days to 4. • Wrote an IAM review playbook adopted by all platform squads. • Automated evidence collection for ISO 27001 audits, saving the compliance team roughly 15 days of work each cycle. Partnered with finance to tag and review accounts, uncovering several forgotten test environments with open access.
2018 – 2021	**Security Operations Analyst** Tessellate Telecom	• Monitored alerts in Splunk, investigated incidents and escalated confirmed compromises. • Built detection rules for suspicious API key use that raised the true-positive rate noticeably. • Contributed to the incident response runbooks and ran tabletop exercises twice a year. • Tuned noisy alerts by adding context from asset inventory, which let the team focus on real incidents. • Presented a lessons-learned review of a credential leak to senior management.
2016 – 2018	**IT Support Analyst** Oyelaran Technologies	• First-line support for 400 users, account lifecycle and endpoint hygiene. • Moved into security after automating the leaver process in Python. • Learned scripting and basic networking, which later became the foundation for cloud work.

EDUCATION

2012 – 2016	BSc Information Technology	University of Ibadan Heights (fictional)

LANGUAGES

English (native), Igbo (native), French (A2)

CERTIFICATIONS

- AWS Certified Security – Specialty
- CISSP (Associate)
