Fionnuala Brennock

Junior Data Engineer

CONTACT

fionnuala.brennock@example.com
Cork, Ireland

SKILLS

- Python
- SQL
- Pandas
- Airflow
- PostgreSQL
- Docker
- Git
- Azure Data Factory
- CSV and JSON parsing
- Excel

LANGUAGES

- English (native)
- Irish (B2)

EDUCATION

- BSc Data Science, Munster Coastal University (2020 – 2024)

SUMMARY

Recent graduate working on my first data engineering role. I build and maintain small ETL jobs, learning how to make them reliable. Eager to learn orchestration and cloud data services from a strong team. I keep a small notebook of lessons learned from production incidents, and I am happy to be paired with a mentor. I am a careful, curious learner who asks good questions, writes things down and enjoys small, well tested improvements.

EXPERIENCE

Junior Data Engineer, Harbourline Health Analytics — 2024 – Present

- Maintain 20 Airflow DAGs that load hospital scheduling data into PostgreSQL.
- Fixed a recurring duplicate-row bug by adding idempotent upserts.
- Wrote documentation for each pipeline and a runbook for failed loads.
- Added row count and null checks after each load step, alerting the team channel when thresholds are breached.
- Contributed to code reviews and learned to explain pipeline failures clearly to non-technical colleagues.

Data Intern, Corrib Energy Services — 2023 (6 months)

- Cleaned meter reading files with Pandas.
- Built a simple dashboard for consumption trends.
- Presented my findings to the energy analysts and incorporated their feedback into a second version.
- Learned Git workflow, code review etiquette and basic testing under the guidance of a senior engineer.
- Completed a rotation with the data science team and prepared training datasets for a readmission model.

Part-time Support Analyst, Lee Valley Computers — 2021 – 2023

- Answered customer support tickets while studying and learned basic scripting.
- Wrote small Python utilities to rename and sort files for the repair team.
- Documented common faults in the knowledge base.
- Researched open health data sources and compared formats for a team proof of concept.
- Documented data cleaning decisions so that colleagues could repeat the analysis.
