- iptables
- LVM
- rsync

LANGUAGES

- Swedish (native)
- English (fluent)

CERTIFICATIONS

- LPIC-2

EDUCATION

- Higher Vocational Diploma, Network Administration, Gothenburg Technical Institute (2008 – 2010)

SUMMARY

Linux administrator, thirteen years. I keep mail, web and database servers running for a hosting provider and enjoy scripting my way out of repetitive work. Keen on security hardening and clean documentation. Outside work I tinker with old computers, brew beer and take part in a local amateur radio club. I enjoy mentoring new technicians and write short guides for the support team.

EXPERIENCE

Linux Systems Administrator, Gota Web Hosting AB 2012 – Present

- Administer 250 physical and virtual servers hosting 9,000 customer sites.
- Run mail infrastructure handling 2 million messages a day, with spam filtering and blacklist monitoring.
- Tune MariaDB replicas and schedule consistent backups verified weekly.
- Wrote Bash and Perl tools for account provisioning that saved support about 15 hours a week.
- Hardened servers against brute-force attacks with fail2ban, key-only logins and automated updates.
- Managed a migration of 1,500 websites between data centres in a single month with minimal downtime.
- Provide third-line support to the customer care team and work through complex mail delivery and database performance cases.
- Take part in an on-call rota every sixth week and write post-incident summaries.
- Run quarterly restore tests on randomly chosen customer accounts and record the results.
- Contribute to hiring by interviewing candidates for technician roles and preparing practical Linux troubleshooting exercises.
- Keep configuration files under version control with Git and review changes with a colleague before deployment.

IT Technician, Skagerrak Shipping Services 2010 – 2012

- Maintained Linux servers and desktop support for office staff.
- Documented server builds and recovery steps in a wiki used by the whole team.
- Handled server installs, cabling and rack work in the data centre.
- Set up the first centralised log server for the support team.
