Jasper Vandenbroucke

Platform Engineer

CONTACT

jasper.vandenbroucke@example.net
Ghent, Belgium

SKILLS

- Kubernetes
- Terraform
- CI/CD
- Java
- Kotlin
- Helm
- Argo Workflows
- GCP
- Prometheus
- Kustomize
- Docker

LANGUAGES

- Dutch (native)
- English (fluent)
- French (B2)

EDUCATION

- MSc Software Engineering, Universiteit Flandria (2017 – 2019)

SUMMARY

Platform engineer who came over from backend development. Four years building paved roads: Kubernetes, Terraform and CI/CD templates that other teams can adopt in an afternoon. I still enjoy writing Java when the platform needs a custom controller. In my spare time I contribute to a small open-source Kubernetes operator project and mentor developers who want to learn more about infrastructure.

EXPERIENCE

Platform Engineer, Leie Mobility Group 2022 – Present

- Build and maintain the internal Kubernetes platform used by 15 product teams.
- Provide reusable Terraform modules and CI/CD templates; adoption reached 90% of services in a year.
- Wrote a Kotlin operator that automates namespace creation, quotas and network policies.
- Support teams during onboarding through office hours and short workshops.
- Introduced policy checks in pipelines to enforce resource limits, labels and image provenance.
- Improved cluster costs by 25% by right-sizing node pools and introducing autoscaling.
- Maintain a documentation site with tutorials, reference pages and a changelog, reviewed by product teams every quarter.
- Run a fortnightly office hour where teams bring problems, and track recurring questions to decide what to automate next.
- Investigate production incidents together with developers and propose platform improvements that prevent a repeat.

Backend Developer, Scheldt Software 2019 – 2022

- Developed Java services for a logistics API.
- Started the first Docker-based deployments and pipelines for the team.
- Wrote integration tests and improved build times.
- Reduced average build time by 40% with caching and a modular build structure.
- Learned how to design for both developers and operators through close collaboration with colleagues.
- Designed REST endpoints and background workers in Java, with attention to timeouts, retries and graceful shutdown.
- Participated in code reviews and wrote migration scripts for relational databases.
