Kavya Raghunathan

Software Engineer II, Backend

kavya.raghunathan@example.com · Bengaluru, India

SUMMARY

I build search and recommendation backends in Go. Comfortable with concurrency patterns, profiling and capacity planning. Prefer measurable outcomes and write design notes before code. I enjoy teaching and have run internal workshops on profiling, and I like partnering with product managers to turn vague ranking ideas into measurable experiments.

SKILLS

Go, Elasticsearch, gRPC, Redis, Kafka, pprof, Prometheus, MongoDB, Concurrency patterns, Benchmarking, Helm charts, Python, A/B testing, Capacity planning, Mentoring

EXPERIENCE

Software Engineer II, Tarang Commerce 2021 – Present

- Rewrote the product search gateway in Go, lowering CPU use by 45% and p95 latency from 220 ms to 90 ms, partnering with data scientists and product managers to run weekly experiments, with every ranking change measured against click-through and conversion before a wider launch.
- Introduced worker pools and backpressure to protect Elasticsearch during sales events.
- Packaged services as Helm charts and handed them to the platform team, who run the k8s clusters.
- Built a latency dashboard per endpoint and added alerts that now page on regressions before customers notice.
- Mentor two engineers on concurrency design and review their pull requests every week.

Software Engineer, Kaveri Logistics 2018 – 2021

- Built tracking APIs in Python, later ported to Go, in a team of six where I was the first engineer to introduce benchmarks and load tests into the release checklist.
- Wrote Kafka consumers processing 30 million events daily.
- Created load-testing scripts for release sign-off.
- Reduced nightly index rebuild time from five hours to ninety minutes by parallelising the pipeline.
- Collaborated with data scientists to expose ranking models behind a stable gRPC interface.

Associate Engineer, Mysore Software Services 2016 – 2018

- Maintained Java and Python utilities for a travel booking client.
- Wrote automated regression tests and fixed production defects.
- Learned Git workflows and code review practice.
- Took part in hackathons and won an internal prize for a fast address-matching prototype.
- Supported release nights and learned the value of runbooks and rollback plans.

EDUCATION

- BE Information Science, Visvesha Institute of Technology (2014 – 2018)

LANGUAGES

English (fluent), Kannada (native), Hindi (fluent)
