Marisol Quintanilla-Ruiz

Cloud Engineer

CONTACT

marisol.quintanilla-ruiz@example.com
Madrid, Spain

SKILLS

- GCP
- GKE
- Cloud Run
- Config Connector
- Deployment Manager
- Cloud Build
- Artifact Registry
- BigQuery administration
- IAM
- VPC Service Controls
- Python
- Bash

LANGUAGES

- Spanish (native)
- English (C1)
- Catalan (B2)

CERTIFICATIONS

- Google Cloud Professional Cloud Architect

EDUCATION

- Grado en Ingeniería Informática, Universidad Politécnica de Castelmar (2014 – 2018)

SUMMARY

Cloud engineer with six years on Google Cloud. I build secure, cost-aware environments for data and web teams. Fan of Cloud Run, Config Connector and tidy IAM. I speak at local meetups about FinOps. Beyond engineering I coordinate a monthly FinOps meetup in Madrid and enjoy translating cloud pricing into language that finance teams find useful.

EXPERIENCE

Cloud Engineer, Sierra Nevada Analytics 2020 – Present

- Designed the organisation hierarchy, networking and IAM model for 40 GCP projects.
- Provision infrastructure declaratively with Config Connector and reusable blueprints.
- Moved 18 stateless services to Cloud Run with Cloud Build triggers, shortening release cycles from days to hours.
- Cut monthly spend by 28% through committed use discounts, labels and weekly cost reviews.
- Implemented organisation policies that block public buckets and enforce regional restrictions.
- Introduced a landing-zone checklist and baseline for every new project so that security reviews take hours, not weeks.
- Introduced budgets and alerts per project, plus weekly anomaly notifications that caught a runaway query costing several thousand euros.
- Run quarterly access reviews and remove unused service accounts and permissions.
- Run a monthly review with data teams to retire unused datasets, buckets and idle clusters, reporting savings to engineering managers.

Junior Cloud Engineer, Tajo Soluciones TI 2018 – 2020

- Supported customers migrating workloads to GCP.
- Prepared Deployment Manager templates and migration checklists.
- Handled first-line incidents for cloud customers.
- Built a cost dashboard in BigQuery for engineering managers, which led to three major clean-up campaigns.
- Mentored two graduate engineers during their first year.
- Prepared workshops for customers on identity, networking and cost control on Google Cloud, attended by around 60 people.
