- Airtable
- Retool

LANGUAGES

- Polish (native)
- English (B2+)

EDUCATION

- BA Management, Jagiellon Plains University (fictional) (2009 – 2012)

SUMMARY

Product manager for internal tooling and automation. I started as a support lead, so I design software for the people who have to use it eight hours a day. Practical, calm and strongly user-centred. I prefer plain language, short documents and regular demos to keep users close to the work. I am also a keen advocate for accessible software.

EXPERIENCE

Product Manager, Internal Tools, Vistula Insurance Group — 2019 – Present

- Manage a portfolio of six internal tools used by 1,800 claims handlers.
- Replaced a spreadsheet-based approval process with a web workflow; handling time fell from 3 days to 6 hours.
- Run training sessions and office hours to drive adoption, reaching 92% regular use.
- Work with two developers and a designer; I prioritise with a monthly steering group.
- Created a feedback loop with claims handlers through monthly user groups and a simple suggestion form. Evaluated three vendor solutions and recommended building the simple ones in-house.

Customer Support Team Lead, Vistula Insurance Group — 2015 – 2019

- Led a team of 12 agents and handled escalations.
- Documented recurring pain points and began shaping requests for the IT department.
- Mapped support processes, found bottlenecks and proposed practical fixes.
- Trained 30 new agents each year on systems and policies.

Customer Service Agent, Pomorze Telecom — 2012 – 2015

- Handled customer calls and complaints for mobile subscribers.
- Was the person colleagues asked when they needed help understanding the billing system.
- Recorded recurring complaints in a simple log, which later became the basis for a process improvement project.
- Learned to read call statistics and handle difficult customers calmly.
- Trained two colleagues in the new CRM and received a team award for customer care.
