Mateusz Gorecki

Junior Go Developer

CONTACT

mateusz.gorecki@example.org
Gdansk, Poland

SKILLS

- Go
- PostgreSQL
- gRPC
- Docker Compose
- Git
- REST
- Testify
- Swagger
- Linux basics
- SQL
- Debugging
- Agile (Scrum)
- Code review

LANGUAGES

- Polish (native)
- English (B2)

CERTIFICATIONS

- Go fundamentals online course, completed with distinction
- Workshop on testing and code review practices

EDUCATION

- BSc Computer Science, Pomeranian University of Technology (2021 – 2024)

SUMMARY

Junior developer with 18 months in a product team writing Go. I enjoy turning requirements into small, readable services and learning from code reviews. In my free time I build small tools in Go, such as a command-line budget tracker, and I take part in coding challenges to keep my fundamentals sharp. I welcome direct feedback.

EXPERIENCE

Junior Go Developer, Baltic Parcel Services 2025 – Present

- Implemented parcel status endpoints in Go used by two mobile apps, which gave me early exposure to production traffic, real data quality issues and the discipline of writing code that other people have to maintain after me.
- Added pagination and filtering to the tracking API.
- Wrote tests with Testify and mocks for external carriers.
- Learning to profile services using pprof.
- Joined the on-call rota as a shadow and learned how to read logs and metrics during incidents.

Trainee Developer, Gdansk Software Lab 2024 – 2025

- Built a small admin panel backend, where my mentor taught me to read stack traces calmly, split large tasks and write meaningful commit messages.
- Fixed bugs in a Java legacy reporting tool.
- Wrote documentation for onboarding.
- Contributed a bug fix to an internal library after finding a race condition in a unit test.
- Presented a short demo of the tracking API to non-technical colleagues.

Summer Intern, Gdansk Port Technology 2023 – 2023

- Built a small tool to compare shipping schedules from spreadsheets.
- Learned how to write clear tickets and commit messages.
- Observed the operations team during a busy season.
- Wrote small utilities in Python to clean spreadsheet data.
- Shadowed a senior engineer and learned how production support works day to day.
