SKILLS

- C#
- .NET
- NUnit
- SpecFlow
- Playwright
- Azure DevOps
- WireMock
- Service virtualisation
- SonarQube
- API testing
- Performance testing (JMeter)
- Postman
- Page object pattern
- Test reporting
- Code review
- Test architecture
- Mentoring
- Agile
- Git
- Docker
- Git
- Continuous testing
- Test data builders

LANGUAGES

- English (native)
- Igbo (conversational)
- French (B1)

CERTIFICATIONS

- Microsoft Azure DevOps training course

EDUCATION

- BEng Software Engineering (capstone: automated grading platform), Lakeshore Polytechnic University (2010 – 2014)

SUMMARY

Software development engineer in test with eight years of experience building tooling that lets developers ship with confidence. I write production-quality code for test infrastructure, favour fast feedback and treat test failures as product bugs. I enjoy architecture conversations, working alongside developers and writing code that others can extend. I volunteer teaching programming to newcomers. I like short feedback loops and clear ownership. I enjoy debugging.

EXPERIENCE

SDET, Maple Ridge Payments 2020 – Present

- Built a .NET test harness with service virtualisation so teams can test without shared environments.
- Cut average pull request feedback from 40 to 9 minutes by sharding tests.
- Added JMeter load profiles that exposed a database lock issue before launch.
- Maintain an internal library of test helpers used by eight teams, with semantic versioning and release notes.
- Investigate flaky failures weekly and publish root causes to the engineering channel.

QA Automation Engineer, Huron Freight Tech 2016 – 2020

- Automated 600 regression scenarios in SpecFlow and Selenium.
- Introduced code coverage gates with SonarQube.
- Partnered with developers to refactor untestable legacy modules.
- Mentored two co-op students.
- Built reusable page objects and data builders that shortened new test creation by half.

QA Analyst, Niagara Retail Systems 2014 – 2016

- Created manual test plans and ran release sign-off checks.
- Learned exploratory techniques and structured reporting under a strong test lead.
- Supported production releases with checklist-based verification.
- Wrote test reports for stakeholders and tracked defects through to release.
- Learned SQL and API testing basics with Postman collections.
