SKILLS

- People management
- Sprint planning
- Code review culture
- Mobile and API delivery
- Stakeholder updates
- Mentoring
- Recruitment interviews
- Node.js background

LANGUAGES

- English (native)
- Igbo (native)

EDUCATION

- BSc Computer Science, University of Lagos Lagoon (fictional) (2011 – 2015)

SUMMARY

Newly appointed engineering manager, two years into the role after seven as a developer. I lead a small mobile and API team in the fintech space and am learning every day about coaching, prioritisation and saying no politely. I enjoy writing documentation and sharing what I learn, and I seek mentors who have grown from lead to director. I am comfortable in a fast-moving environment.

EXPERIENCE

Engineering Manager, Eko Remit 2023 – Present

- Lead a team of six engineers working on a remittance app and its API.
- Hold fortnightly 1:1s and set growth goals; two engineers were promoted in my first year.
- Improved sprint predictability from 60% to 85% of committed work delivered.
- Interview candidates and onboard new hires with a 30-60-90 day plan.
- Run a monthly learning session where team members present new tools or ideas. Work with product on quarterly planning and shield the team from last-minute scope changes. Completed an internal management training programme and a coaching course.

Senior Software Engineer, Eko Remit 2019 – 2023

- Built Node.js payment services and mentored two junior engineers.
- Led the integration with three banking partners.
- Reduced app crashes by 35% by introducing a stricter release checklist.
- Gave regular feedback to junior colleagues during pair programming.

Software Developer, Ajegunle Digital Works 2016 – 2019

- Developed web applications and REST APIs for small business clients.
- Learned about version control, testing and deployment practices from senior colleagues.
- Fixed defects, wrote tests and learned code review habits from the senior engineers on the team.
- Participated in daily stand-ups and helped decide on estimates for each task.
- Joined a hackathon team that built a prototype invoicing tool in a weekend.
