Oisin Callaghan

Backend Engineer

oisin.callaghan@example.org · Galway, Ireland

SUMMARY

Backend engineer, seven years of experience across healthcare and IoT, now writing Go. I like pairing, keeping APIs backwards compatible and watching dashboards after a release. I enjoy health-tech because the quality bar is high and the impact is visible. I participate in on-call, write blameless post-mortems and like pairing with junior colleagues.

SKILLS

Go, PostgreSQL, MQTT, REST, GraphQL (gqlgen), Redis, Docker, GitLab CI, Datadog, Testing, Python, SQL, Privacy by design, Pair programming, Incident response

EXPERIENCE

Backend Engineer, Salthill Health Systems 2021 – Present

- Built appointment and referral services in Go for 15 hospitals, working with clinicians and compliance officers so that every data flow was documented, access controlled and traceable, which shaped how I think about privacy by design.
- Introduced GraphQL gateway with gqlgen, simplifying three client apps.
- Set up GitLab CI jobs for linting and tests on every merge request.
- Cut flaky tests from 30 to 2 by isolating database fixtures.
- Set up consumer-driven contracts with two partner vendors so interface changes could be released safely.

Software Developer, Connacht Devices 2019 – 2021

- Wrote Python services for sensor data, where I learned to deal with intermittent connectivity, strange device firmware and customers who needed answers quickly.
- Ported a device registry to Go.
- Supported field engineers with logs and diagnostics.
- Rewrote the referral workflow, shortening average hospital processing time by two days.
- Documented every public API with examples that frontend teams use directly.

Graduate Developer, Atlantic Code Works 2018 – 2019

- Worked on web forms and SQL reports.
- Led a small proof of concept for sensor data buffering when connectivity drops.
- Joined a hackathon team that placed second with a medication reminder prototype.
- Wrote scripts for importing legacy data and learned the importance of careful validation.
- Attended customer meetings to understand daily workflows.

EDUCATION

- BSc Computing, Western Atlantic University College (2014 – 2018)

LANGUAGES

English (native), Irish (C1)

CERTIFICATIONS

- Health data privacy and GDPR awareness training
