SKILLS

- Terraform
- Kubernetes
- CI/CD
- Azure
- GitHub Actions
- Helm
- SonarQube
- Trivy
- Python
- PowerShell
- Grafana
- Linux

LANGUAGES

- English (native)
- Irish (B1)

CERTIFICATIONS

- HashiCorp Certified: Terraform Associate
- Microsoft Azure Administrator Associate

EDUCATION

- BSc Information Systems, Corrib University College (2012 – 2016)

SUMMARY

DevOps engineer, eight years. Hands-on with Terraform, Kubernetes and CI/CD for a healthcare software company, where compliance matters as much as speed. I like clear change records and fast feedback loops. I enjoy working with clinical and compliance colleagues, translating requirements into controls that engineers can actually follow, and I take pride in audit-ready, well-documented systems.

EXPERIENCE

DevOps Engineer, Liffey Health Systems 2019 – Present

- Provision Azure environments with Terraform and keep state in locked, versioned storage.
- Run Kubernetes workloads for a patient scheduling product; zero unplanned downtime in the last 18 months.
- Standardised CI/CD workflows in GitHub Actions with static analysis, container scanning and signed releases.
- Prepare evidence for HIPAA-style and ISO audits straight from pipeline logs.
- Introduced secret scanning, dependency checks and branch protection across 60 repositories.
- Implemented encrypted backups and disaster recovery tests twice a year, meeting a four-hour recovery objective.
- Run quarterly disaster recovery exercises and record recovery times against agreed objectives.
- Work with the data protection officer to map technical controls to regulatory requirements and keep the mapping current.
- Provide guidance to developers on safe configuration of cloud storage, network rules and access roles, with clear examples in the wiki.
- Handle on-call escalations for the scheduling product one week in four, with documented handovers.

Build Engineer, Boyne Valley Software 2016 – 2019

- Maintained Jenkins build farm and artefact storage.
- Introduced automated regression runs that ran on every merge.
- Supported 40 developers across three offices.
- Reduced pipeline time from 35 to 14 minutes with caching, parallel jobs and selective test runs.
- Mentored two apprentices.
- Wrote scripts that generate environment inventories and flag drift between declared and actual configuration.
