Szymon Przybylski

Java Developer

CONTACT

szymon.przybylski@example.net
Krakow, Poland

SKILLS

- Java
- Spring Boot
- Hibernate
- PostgreSQL
- JUnit
- Maven
- Kubernetes
- Terraform
- CI/CD
- AWS
- Docker
- Jenkins
- Ansible
- Helm
- ArgoCD
- Prometheus
- Grafana
- Azure
- GitHub Actions
- Linux
- Refactoring
- Agile (Scrum)
- Technical documentation

LANGUAGES

- Polish (native)
- English (B2)

EDUCATION

- BSc Computer Science, Lesser Poland University of Applied Sciences (2016 – 2020)

SUMMARY

Java developer focused on insurance back-office applications. Five years of experience in Spring Boot and relational databases. Always looking to improve my cloud and DevOps knowledge. Outside work I contribute to a small Java open-source library and follow tech blogs about the wider industry. At work my responsibility is application code, domain rules and tests.

EXPERIENCE

Java Developer, Wisla Ubezpieczenia IT 2022 – Present

- Implement policy and claims features in a Spring Boot application, sitting with claims handlers to observe real workflows, which helped me to remove several confusing steps and to simplify the screens they use every day.
- Wrote JUnit tests for pricing rules.
- Our team description mentions Kubernetes, Terraform and CI/CD, but these are managed by a separate operations group; I have only seen them in demos.
- Fix defects reported by the claims department.
- Work with business analysts to clarify claims rules and write acceptance criteria for each user story.

Junior Java Developer, Krakow Softworks 2020 – 2022

- Built CRUD screens and REST endpoints, where I learned the basics of relational design, version control and writing automated tests for business rules.
- Wrote SQL migrations.
- Learned Hibernate performance tuning.
- Learned to refactor legacy code safely using characterisation tests.
- Helped migrate data from an old mainframe export into PostgreSQL.

Support Analyst, Krakow Insurance Brokers 2018 – 2020

- Handled first-line support for an internal policy system and wrote simple SQL queries.
- Documented recurring problems and proposed fixes to developers.
- Studied part-time and moved into development.
- Answered user questions by phone and e-mail and noticed patterns in recurring defects.
- Wrote small SQL scripts to correct bad data safely.
