Tobiasz Wierzbicki

Senior Application Security Engineer

tobiasz.wierzbicki@example.com · Wrocław, Poland

SUMMARY

Application security engineer with twelve years in secure software delivery, the last six leading a small AppSec team. I embed threat modelling and code review into how product squads work, and I care more about fixing root causes than about long vulnerability reports. Outside work I run a local meetup on secure development and write short internal guides for new engineers.

SKILLS

Threat modelling (STRIDE), SAST/DAST tuning, Semgrep, Burp Suite, OWASP ASVS, Secure code review (Java, Go), OAuth2/OIDC, Secrets management, Bug bounty triage, Security champions programme

EXPERIENCE

Lead Application Security Engineer, Brightwell Payments 2019 – Present

- Built a security champions network of 28 developers; critical findings reaching production fell by 61% in two years.
- Introduced threat modelling workshops for every new payment feature, reviewing roughly 40 designs per year.
- Tuned Semgrep rules and static analysis gates in the build pipeline, cutting false positives from 70% to under 20%.
- Ran the private bug bounty programme, triaging 300+ reports and agreeing remediation SLAs with engineering leads.
- Published a developer-friendly secure coding handbook with worked Java and Go examples, now part of every engineer's onboarding. Partnered with legal and compliance to map PCI requirements onto concrete engineering tasks.

Security Engineer, Norvik Systems 2015 – 2019

- Performed manual code reviews of Java services handling authentication and session management.
- Ran quarterly penetration tests against internal web apps and wrote clear remediation guidance for developers.
- Rolled out a central secrets vault and retired hard-coded credentials across 60 repositories.
- Reported findings in the team backlog rather than PDFs, which doubled the fix rate within one sprint.
- Evaluated three static analysis products and recommended the one that best fitted our monorepo.

Software Developer, Lumora Software 2012 – 2015

- Developed Java back-end services for logistics customers.
- Fixed injection and access-control flaws found in customer audits and learned secure coding on the job.
- Earned a reputation for explaining injection attacks with live demos during lunch sessions.

EDUCATION

- MSc Computer Science, Wrocław Polytechnic Institute (fictional) (2010 – 2012)
- BSc Informatics, Wrocław Polytechnic Institute (fictional) (2007 – 2010)

LANGUAGES

Polish (native), English (C1), German (B1)

CERTIFICATIONS

- CSSLP

- Offensive Security Web Expert (OSWE)
