Vikram Chaudhry

Lead Java Engineer

CONTACT

vikram.chaudhry@example.org
Pune, India

SKILLS

- Java
- JVM tuning
- Concurrency
- Spring
- Kafka
- Aeron
- Oracle
- Redis
- JMH
- gRPC
- Multithreading
- FIX protocol
- Latency engineering
- Technical leadership
- Capacity planning

LANGUAGES

- English (fluent)
- Hindi (native)
- Marathi (fluent)

CERTIFICATIONS

- Advanced Java concurrency and performance training course
- Internal certification in electronic trading risk controls

EDUCATION

- BE Computer Engineering, Maharashtra Technical Institute (2007 – 2011)
- Postgraduate Diploma in Quantitative Finance, Pune School of Financial Studies (2014 – 2016)

SUMMARY

Lead engineer with thirteen years building trading and risk systems in Java. Strong on concurrency, low-latency design and performance tuning. I lead a team of seven and still write code daily. I like systems where microseconds matter and where correctness is non-negotiable. I regularly run deep-dive sessions on the Java memory model and enjoy teaching engineers to read profiler output.

EXPERIENCE

Lead Java Engineer, Sahyadri Capital Markets Tech — 2018 – Present

- Lead the team behind a pre-trade risk engine with 150 microsecond median latency, working directly with traders and quantitative researchers, who set demanding latency targets that we verified through repeatable benchmarks and production replays.
- Cut garbage collection pauses by 90% through allocation profiling and object pooling.
- Designed the market data distribution layer on Kafka.
- Hire and mentor engineers.
- Created a performance regression suite executed before every release, preventing three slowdowns from reaching production.

Senior Developer, Indus Brokerage Systems — 2013 – 2018

- Developed order routing and FIX gateways, where I also introduced weekly performance reviews and a shared checklist for safe changes during trading hours.
- Created benchmarks with JMH for release gates.
- Supported production during market hours.
- Led capacity planning for market-open spikes and introduced load-shedding rules for downstream consumers.
- Interviewed and hired seven engineers over four years.

Developer, Pune Infosoft — 2011 – 2013

- Wrote Java back-office tools for settlement.
- Maintained Java services for order confirmations.
- Learned market structure and fixed production incidents during trading hours.
- Worked on settlement reports and learned SQL tuning on a large Oracle database.
- Took part in release nights and learned how to roll back safely.
